

Miyawaki mini-forest project

Key steps

1 Seize the project big picture

Define the project in broad terms: **where** (even a vague list of places), **with whom**, **when**, with **which aim**, in which context (urban, periurban, rural)... etc.

A projet is **never created alone**: once your idea has born, share it with your friends, your trusty circles to create a solid group of motivated people.

Don't hesitate to contact people around you who can help you to push the project forward and share it to other communities and institutions: associations, **municipal council, city green space operational units**, local actors...

Now that your local group is constituted, you have for sure some **contacts** that can be mobilised !

SHARE
ENLIST
FEDERATE

2 Identify project action leverages

Find the **opportunities** that concretely permit your project happen:

IDENTIFY
CONTACT
APPLY

3 Validate the project (min 2 months)

Once a contact has been established with the right people and partners, you should **define precise tasks** for everyone to contribute at ease:

CLARIFY
DETAIL
EXCHANGE
CONFIRM

4 Organise the plantation (min 1 month)

You are almost done! It's time to broadcast information about your project to let more people get involved and help to create the forest, i.e. planting!

Municipality tasks to seize: plant and soil bio-additions order, tool rental, onsite delivery of all materials, team building.

COMMUNICATE
COORDINATE

5 Maintain the mini-forest (3 years)

Weeding uonce per month during the first year, and then progressively less down the line.

LOOKAFTER
SUSTAIN
